

NA-007 Role of the NANDTB with respect of the Australian Standard AS 3669

AS 3669 Qualification and approval of non-destructive testing personnel – Aerospace, was formulated to assist the aerospace industry in standardising the training and qualification of NDT personnel within that industry. AS 3669 describes requirements for a company based NDT training and qualification system whereby approval of personnel to any level of NDT can only be made by the employer. The NANDTB has a role in the recognition of employer's training and qualification programs.

In May 2009 the NANDTB adopted EN 4179 and NAS 410 as the standards for employer based training and qualification. The Board will continue to adjudicate on training and qualification gained under AS3669 to the extent required by its previous application within the aerospace industry.
